SUBJECT: ARTEL (FIKE) SUPERFUND SITE, NITRO, WV
METHYL MERCAPTAN
TRANSFER OPERATION

Dear Dr. Lee:

Enclosed is the Phase II Work Plan for the removal of the methyl mercaptan from the Artel Chemical Company site in Nitro, WV.

The transfer is currently scheduled to start Sunday morning April 23, 1989 pending completion of on-site preparations, a final on-site operational and readiness review (ORR) and weather conditions. As discussed, we mutually agreed to a Sunday start date to avoid planned community little league opening day events in the adjacent ball fields.

Please contact me with any questions or additional information concerning Phase II Work Plans.

Sincerely,

Raymond C. Merrell
